

MEGA SPLASH

Your first shower from the feet upwards

After a short countdown the customer will be released and starts free falling over 22 metres to experience a pure and undisturbed free fall at it's best.

The customer then drops very softly into the huge double net, just like into a cushion and without any impact. When the customer touches the net, millions of water drops explode into a cascade, soaking the customer from feet to head.

SCAD Dive is a REAL free fall system, consisting of an impressive 4 column tower, an airtube framed double net and a shallow pool in the centre of the tower.

The customers use an 8 passenger elevator cabin to get to the tower top. The customers who wish to experience more then the panoramic view, will be connected to the release system in a very comfortable controlled free fall harness. In this harness they can not change the body position during the entire free fall under any circumstances.

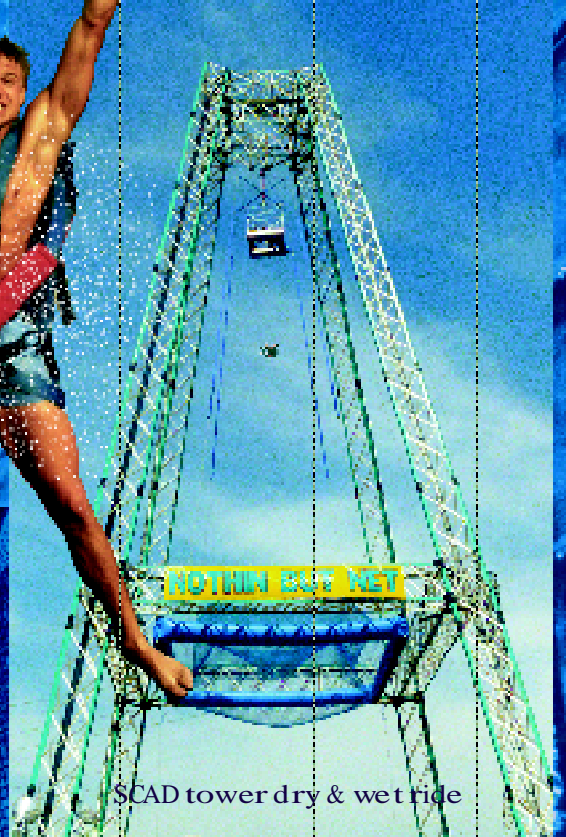

The combination of this amazing unattached free fall and the exciting big splash from your feet upwards, make SCAD Mega Splash a unique new highlight for any waterpark.

Highlights & Facts

- first tower ride for waterparks
- efficient fail safe operation
- Hourly capacity of up to 80 customers
- Small footprint of 16x16 m/ 50 x 50ft

SCAD tower dry & wet ride

At the same time the double net has soaked up the water in the pool and is lifted into catching position at 10 m height in the centre of the tower.
